

Solving functional equations with algebra

Gábor Horváth

University of Debrecen, Hungary and Johannes Kepler University, Austria

Motivated by investigations of Babbage, we consider functional equations involving one unknown function and a finite set of known functions forming a group under composition. We show how algebra can be utilized for solving such functional equations.

This is a joint work with Mihály Bessenyei and Csaba G. Kézi.

Partially supported by the Austrian Science Fund (FWF):P24077 at the Institute for Algebra of the Johannes Kepler University Linz and by the Hungarian Scientific Research Fund (OTKA) Grants NK-81402 and by the TÁMOP 4.2.1./B-09/1/KONV-2010-0007 project implemented through the New Hungary Development Plan co-financed by the European Social Fund, and the European Regional Development Fund.
