

Which maximal clones can be maximal C-clones.

Edith M. Vargas García

Universidad Autónoma de la Ciudad de México, México

A restricted version of the GALOIS connection between polymorphisms and invariants, called *Pol – CInv*, is studied, where the invariant relations are restricted to so called clausal relations. Moreover, the relationship of maximal *C*-clones and maximal clones is investigated. It is shown that, with the exception of one special case occurring for $|D| = 2$, maximal *C*-clones are never maximal clones.
