

MASS-DISTRIBUTION OF PARTITIONS OF CONVEX BODIES
BY HYPERPLANES

Jesús Yepes Nicolás

Universidad de Murcia (Spain)

(Joint work with David Alonso-Gutiérrez, Francisco Marín Sola and Javier Martín Goñi)

A classical result by Grünbaum provides the extremal mass ratio for the portions obtained when cutting a convex body by a hyperplane passing through its centroid.

In this work we will discuss various generalizations of this result to the case of cuts (by hyperplanes) through other particular points.
