

**Parameter estimation for critical, symmetric 2-type  
Galton-Watson processes**

KRISTÓF KÖRMENDI and GYULA PAP (University of Szeged)

We introduce the 2-type Galton-Watson process, and define its parameters. Conditional least square estimators for the parameters will be given. We will prove the asymptotic properties of these estimators. We will discuss the problems arising, when trying to generalize the results for the non symmetric case.
